BUSINESS SOLUTIONS

The modern business environment is very complex and competitive. The recent economic slowdown has changed the way we conduct business. Doing more with less is the new mantra. The pressure to cut costs and deliver products and profits is extremely high. This is where you can count on QualiTech compliance solutions for your needs.

About Us

QualiTech was founded in 1993 in recognition of the need for high quality, affordable quality management consultancy service to be more readily available to organizations.

Our Vision: "Compliance with your Sustainable needs"

In light of recent corporate scandals, companies recognize the need for improvement in the measurement and control of non-financial performance. Furthermore, the emergence of restrictive new regulations and transparency requirements put increased pressure on companies to demonstrate not only financial performance but also their environmental, social and economic performance.

QualiTech Compliance solution facilitates reliable data collection, reporting and management. Our solutions are rapidly implemented and offer a practical and effective response to all of your sustainability performance management needs including:

- Regulatory compliance and transparency
- Improvement of operational performance
- Risk prevention and management

Environmental Management System

- ISO 14001 (Environmental Management System)

- ISO 14064 (Qualification and Reporting of Greenhouse Gas Emissions and Removals)

- FSC (Forest Stewardship Council/ CoC Certificate)

- ISO 50001 (Energy Management Standard)

Safety Management System

- ISO 27001 (Information Security Management System)

- TAPA (The Transported Asset Protection Association)

- OHSAS 18001: (Occupational Health & Safety Assessment Series)

- C-TPAT (Trade partnership Against Terrorism)

- ISO 22000 (Food Safety Management System)

- HACCP (Hazard Analysis Critical Control Point)

- RSQAS (Road Safety and Quality Assessment System)

- BRC （The British Retail Consortium ）

Quality Management System

- ISO 9001 (Quality Management System)

- ISO 13485 (Medical Devices Quality Management System)

- TL 9000 (Telecom Quality Management System)

- ISO / TS 16949 (Technical Specification of Quality Management System for International Automotive Industry)

- GMP (Good Manufacturing Practice)

- ISO 20000 (IT Service Management)

Social Accountability Management System

- SA 8000 (Social Accountability Management System)

- BSCI (Business Social Compliance Initiative)

- ETI (Ethical Trade Initiative)

- WRAP (Worldwide Responsible Apparel Production)

- ICTI (International Council of Toy Industries)

- SEDEX (The Supplier Ethical Data Exchange)

- CSR (Corporate Social Responsibility)

Business Challenge

Because business activities are becoming increasingly international, and because many countries have increased and tightened their social regulations, a growing number of companies are reporting on their social performance. As a result, companies have a variety of new needs in terms of information and performance management:

- Social reporting (official Social Report, CoC report, etc.)

- Compliance monitoring (compliance with local social laws, application of companies' internal codes of conduct)

- Management of human capital, a key factor for competitiveness

In order to successfully meet these challenges, companies must have the right reporting tools. HR information systems are not flexible enough and can only partially meet the social reporting needs of human resources and other operational departments.

The QualiTech compliance solution has been designed specifically to meet these new needs: it allows companies to simplify all of their reporting and social monitoring processes and make them more dependable.

Globalization, worldwide supply chains, new environmental, social and ethical standards, fears about product safety, consumers and NGOs' pressure: companies now live in an environment where supply chain management is both increasingly challenging and decisive in terms of business performance and risk prevention.

Corporate responsibility is now extending beyond the company's boundaries to include the global supply chain. The "supplier risk" threatens at any time companies' brands, reputation, security and business continuity.

QualiTech compliance solution is a comprehensive and integrated solution for meeting sustainable development requirements

Essential determinants of a company's performance are the challenges which relate to sustainable development.

Non-financial criteria are now used by stakeholders (employees, investors, customers, suppliers, rating agencies and the media…) to analyze and compare companies.

The requirements for sustainable development data have become progressively more demanding in terms of their degree of transparency, reliability and their ability to be audited.

This being so, a company's capacity to manage and report on their sustainable development performance plays an integral role in the management of their risk and enhancement of operational performance.

Why Compliance audit?

The American Society for Quality, which promotes social responsibility, advises, "Many companies who are looking for long-term profitability are looking for ways to become more socially responsible." A social compliance audit is an effective way for companies and organizations to meet this goal. Social accountability audits are voluntary and help companies develop and implement fair practice programs that are transparent across supply chains.

OWASP

Security Compliance: Best Practices

Security Compliance: Internal Security

GLBA

SB 1386 Compliance
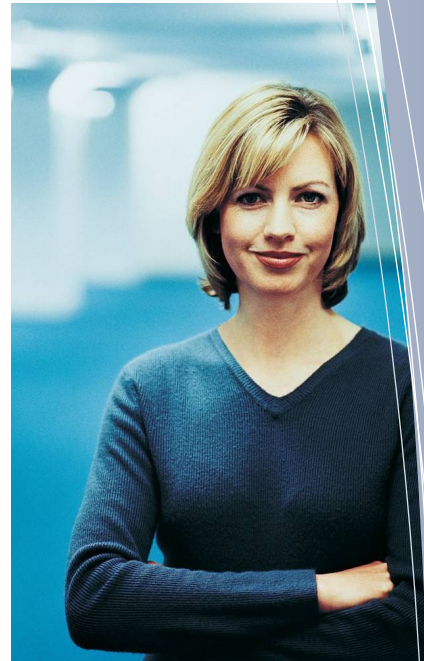

SOX Compliance

HIPAA Compliance

The **purpose** of a social compliance audit is to provide a "business-driven programme for companies who want to harmonize existing efforts in order to deliver a shared, consistent and global approach for the continuous improvement of working conditions in global supply chains.

The **main drivers** in social compliance auditing are retailers and brand manufacturers. This process allows them to have control over their supply chains and ensure they are working with socially responsible and quality companies.

The **goal** of a social responsibility audit is to document and manage an organization's practice with regards to society, environment, shareholders and employees. Major points of focus are fair labor laws, sustainability (environmental impact), and abuse, working conditions and health and safety.

In recent years, competitive pressures, globalization and increasingly discerning consumers have forced retail corporations to increase the number of suppliers they work with and the regions globally from which they source products. As a business diversifies and deepens its sources of supply it simultaneously increases its exposure to a greater number of material social and ethical risks in that supply chain.

AUDITING AGAINST YOUR OWN REQUIREMENTS WILL VALIDATE THE STRENGTH OF YOUR SUPPLY CHAIN.

Given the large number of suppliers typically involved in the supply chain and given the growing social conscience of consumers and an increasing use of the internet, the likelihood of actual brand and reputational harm as a result of poor social and ethical performance in the supply chain is greater than ever before.

As a result, in recent years most corporations have accepted the need to take responsibility for the social and ethical performance of their supply chain. They are also recognizing the benefits of a proactive approach to supplier performance improvement and the benefits of using web-based, purpose-built solutions to provide suppliers, workers, risk managers, compliance departments, boards of directors, investors, consumers, etc. with the right tools and information to constantly monitor, improve and enable supplier performance improvement over time.

Second-party auditing enhances the strength of your supply chain. A second-party audit occurs when an organization audits their suppliers, or their own facilities, to their own proprietary requirements. By finding and correcting problems before they affect the customer or end user, the audit process helps the organization to avoid the risk of product recall, service failure, or compliance issues.

Compliance auditing determines whether a process or transaction has or has not followed applicable rules. If rules are violated, the auditor determines the cause and recommends ways to prevent future deviations. The rules being tested can be those created by the organization for itself through corporate by-laws, policies, plans, and procedures; can be those imposed on the organization through external laws and regulations; or can be those external standards that the organization has chosen to follow (e.g. ISO 9000 quality management systems, or ISO 14001 environmental management systems).

The purpose of an audit and compliance program is to establish an ethical code of conduct, educate employees on this code and ensure its compliance. In addition to establishing an ethical code of conduct, an audit and compliance program involves: training employees on the code of conduct, establishing criteria and procedures for detecting and investigating non-compliance, and establishing criteria and procedures for auditing compliance

What is compliance audit ???

Characteristic of compliance audits, are the yes/no aspects of the evaluation. For each process or transaction examined, the compliance auditor must ultimately decide whether it complies with the chosen standard or does not. Often, the ratio of non-compliant outcomes to compliant outcomes is calculated and used as a basis to estimate an overall percentage of "non-compliance." (Such ratios, often used to extrapolate sample results to the total population, should be verified to be sure that underlying assumptions support their use as estimators.) The auditor typically reports reasons for non-compliance, if found; describes implications and risks of noncompliance; and suggests corrective action to prevent future occurrences.

COMPLIANCE AUDITORS

Our compliance auditors have the skills to research issues effectively using authoritative materials, understand how to apply the knowledge gained to the circumstances being tested, and be able to explain to the organization what compliance means in day-today operations. Reaching a conclusion that an outcome complies or does not comply with a standard is not necessarily simple, especially in domains governed by complex regulations (e.g. occupational health and safety, environmental, employment practices, health care, insurance, federal grants and contracts, employee pensions and benefits, federal tax etc.).

How to Implement an Audit and Compliance Program ???

Stage 1: Develop an ethical code of conduct using a committee representing the various functional components of the company to draft the document. A legal review and approval process involving the board of directors, as the final approval authority, is necessary. To be effective, the document must be tailored to the strategic goals and objectives of the company.
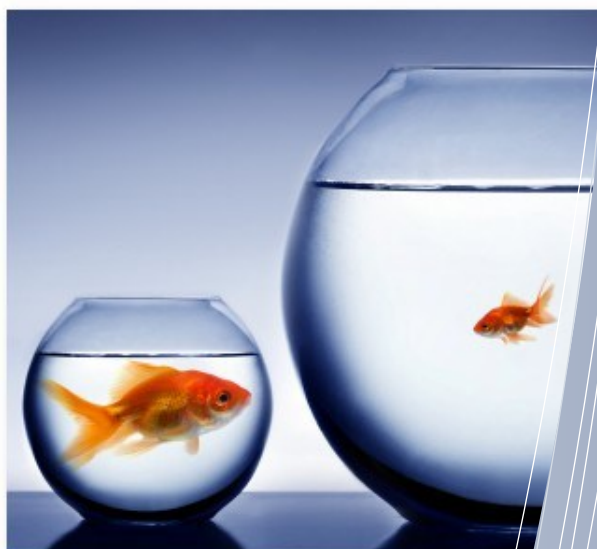

Stage 2: Create a position for a corporate compliance officer independent of management. The corporate compliance officer is the "go to" person regarding the code of ethical conduct, including related training for employees, reporting of noncompliance and related investigations, reporting to management and compliance audits. This position must be independent of management and under the authority of the board of directors with reports provided to management as a service similar to the internal audit function.

Stage 3: Establish reporting responsibilities for the corporate compliance officer. The corporate compliance officer will report regularly (i.e., monthly or quarterly) to the president and board of directors concerning any and all activities regarding the code of ethical conduct and corporate compliance program.

Stage 4: Develop training on the ethical code of conduct and the corporate compliance program. The corporate compliance officer is responsible for ensuring that every employee is adequately trained on the ethical code of conduct and the corporate compliance program, including all officers and directors of the company.

Stage 5: Establish criteria and procedures for investigations of non-compliance with the ethical code of conduct. The corporate compliance officer investigates all suspected code violations. All reports are reviewed and evaluated by the president of the company and a representative of the board of directors and must remain confidential. The corporate compliance officer must also implement policies prohibiting any type of retaliation against a person making a report of non-compliance with the ethical code of conduct.

Stage 6: Determine criteria and procedures for auditing compliance with the ethical code of conduct. The corporate compliance officer is responsible for auditing the company's compliance with the ethical code of conduct at least annually, and these audits should include the effectiveness of and compliance with the company's financial controls and procedures.

What needs to be sustainable manage?

Occupational health and safety (OHS) auditing is a term used to describe a wide range of assessments that can be undertaken for a variety of different purposes.

An OHS management system is a planned, documented and verifiable method of managing OHS hazards. What makes it a system is the deliberate linking and flow of processes that creates an intentional way of managing OHS matters.

Audits are conducted to determine the effectiveness of management systems and to identify the strengths and opportunities for improvements.

GMP regulations require a quality approach to manufacturing, enabling companies to minimize or eliminate instances of contamination, mix ups, and errors. This in turn, protects the consumer from purchasing a product which is not effective or even dangerous. Failure of firms to comply with GMP regulations can result in very serious consequences including recall, seizure, fines, and jail time.

Conducting an environmental audit is no longer an option but a sound precaution and a proactive measure in today's heavily regulated environment. Indeed, evidence suggests that EA has a valuable role to play, encouraging systematic incorporation of environmental perspectives into many aspects of an organisation's overall operation, helping to trigger new awareness and new priorities in policies and practices. Audit objectives typically entail:

- Verification of legislative and regulatory compliance

- Assessment of internal policy and procedural conformance

- Establishment of current practice status

- Identification of improvement opportunities

Social accounting is a relatively new concept for most companies, with increased adoption by bigger companies. Taking the UK for example, 98 of the FTSE 100 companies included information on CSR activities relating to their business on their websites in 2004, with 81 including a full report. However, the majority of FTSE companies did little to engage stakeholders in CSR activities via their websites.

A quality audit is a review in which an auditor analyzes and verifies various records and processes relating to a company's quality program. In general, the purpose of a quality examination is to determine whether the company is complying with its quality program or whether it needs to make changes to its business practices.

A recent survey by the IRU3 looked at 2,003 replies to a questionnaire where drivers highlighted 476 primary attacks. From this figure, 63% of the attacks focused on the vehicle and the load and 43% focused on the driver and their belongings. Separately, 42% of the attacks were reported to have occurred in truck parks and a further 19% of the attacks were at motorway service stations.

Currently, truck parks do exist but many provide a false sense of security which may even result in freight crime. Theft from non-secure parking areas results in over 8300 criminal incidents on the road with a value of €300million every year. Truckpol calculates the average loss per incident at an estimated minimum of 19,000 Euros. Worryingly, these figures may not show the whole picture as many incidents are not recorded.

Benefits

SIMPLIFIED REPORTING AND LOWER COSTS

Social reporting processes take up a company's time, resources and energy, both in human resources and in the company's different functional areas. QualiTech compliance solution offers the following benefits:

- Simplified data collection

- Lower reporting costs

- Automated production of social reports

- Allows teams to concentrate on tasks with higher added value

Through its administration modules, the QualiTech solution enables companies to automate data collection and consolidation processes, thereby reducing the human and financial costs of reporting.

IMPROVEMENT IN MANAGEMENT AND PERFORMANCE

QualiTech compliance solution allows you to analyze and fine-tune a company's social performance beyond statutory reporting requirements. Social compliance experts use QualiTech compliance solution for reporting on the following in particular:

- Employees

- Age groups

- Gender diversity

- Number of managerial and non-managerial staff recruitments and departures

- Absenteeism, including that which is due to industrial accidents

- Training

- Transfers
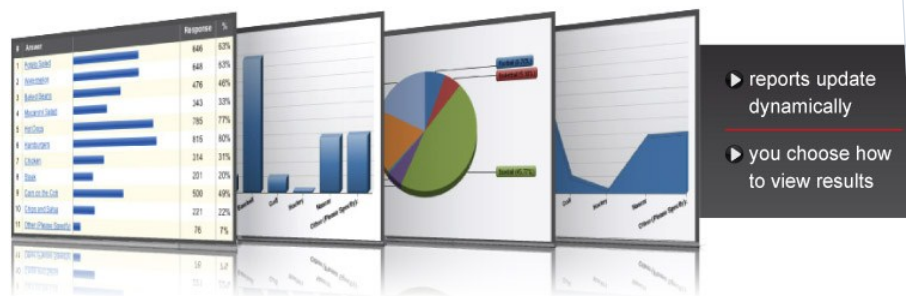

- Rating of workplace atmosphere

MORE RELIABLE PERFORMANCE DATA

Social reporting is a complex exercise. Data is not homogeneous, and it is often difficult to define indicators consistently throughout a company's many and often varied sites and activities.

QualiTech compliance solution allows for more reliable social data through:

- Consistency tests

- Automated unit conversion functionalities

- Integrated data input validation workflow

- Audit functions, which facilitate data verification

▶ reports update dynamically

▶ you choose how to view results

WHY CHOOSE QUALITECH COMPLIANCE SOLUTION?

QualiTech compliance solution is a benchmark solution used by major multinationals and innovative SME's all around the world.
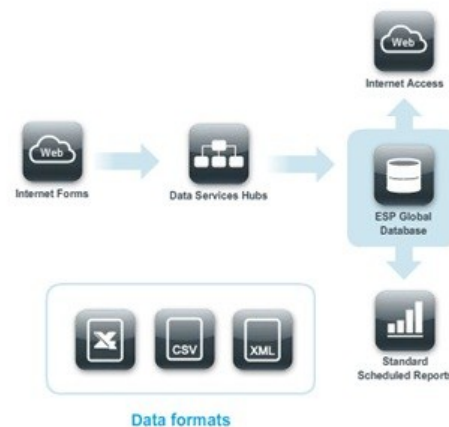

- QualiTech compliance solution is a comprehensive and integrated solution that capitalizes on the best practices of numerous pioneering companies in the field of social reporting.

- The solution has been ergonomically tested by tens of thousands of users and is very easy to use and administer.

- An unmatched business solution, QualiTech compliance solution can accommodate numerous modules and business solutions adapted to social requirements.

- With several hundred projects to their credit, the QualiTech compliance teams offer proven expertise in the implementation and support of projects.

- QualiTech's flexible technology offers companies a solution that is suited to their specific needs and processes and can be rapidly implemented with a simple configuration change.

- QualiTech compliance solution secure web architecture ensures that the solution can be accessed anywhere, anytime.

How it works?

QualiTech compliance solution meets companies' needs for reporting, monitoring, tracking, and enhancing social performance. A comprehensive, integrated web-based solution, QualiTech compliance solution offers the following functionalities: :

- Data collection

- Consolidation

- Reporting

- Management

QualiTech compliance solution is more than just software. At the core of our solution are intelligent Data Services Hubs that manage data capture and extraction from across the globe. Whether you are capturing information from smart meters, supplier reports, internal business systems or simply from paper based documents, data can be securely processed within minutes and made available online via a web browser.

Direct import, non-branded and private label suppliers will need to declare all factories involved in the production of merchandise. Once the supplier declares their factories to your organization, your factory audit process begins by scheduling and conducting an initial audit. After the on-site audit is completed, the factory is provided a report on the findings, which contains suggestions for correcting any violations. Depending on the findings in the audit report and the audit rating, a follow-up audit may be required and scheduled.

Standard text reports are with photos illustration for clear reference. Our well trained and experienced auditors would also give remarks about the factory for more all-rounded reference. To answer customers' specific concerns, we could also customize audit check points. By checking on the company organization, factory facilities and systems, operational procedures, labor working conditions, and any aspects involved in the production process, you will be ensured that the factory you have chosen do have the capability to produce your products with a consistent quality level and comply with Corporate Social Responsibility.
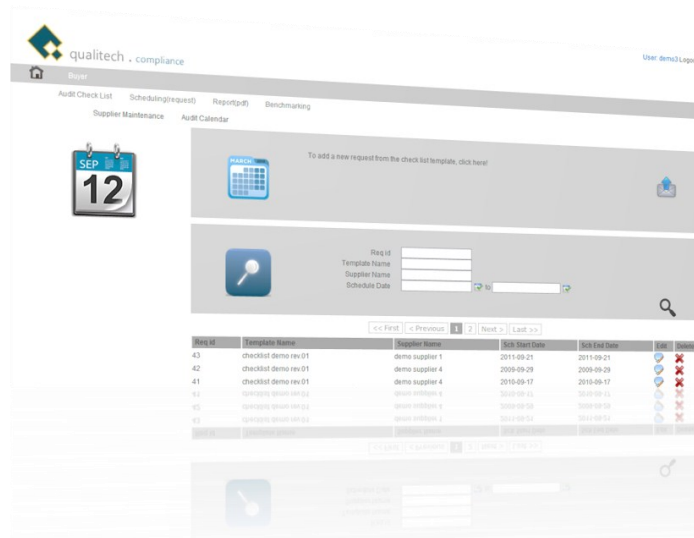

Compliance Audits could be arranged within 3 business days notice, and reports are issued within 48 hours after the factory audit.

Factory Audit Reports help buyers source with confidence and reduce risks. Factory Audit Reports contain crucial information about suppliers' trade and production capabilities. These reports were compiled onsite by a respected third-party inspection company. Apart from the hard facts, Factory Audit Reports also contain suppliers' factory photos to help you get a better understanding of your potential business partners. A Factory Audit includes the following important information;

- A review of the factory's formal business documents; business registration, exporting license, testing certifications, accounting documents;

- A report on the factories operational structure; systems in place, employee breakdown, machinery types, recording processes, quality assurance and systems related certificates, inspection track record;

- Photographic representations: factory entrance, factory production line, machinery, administrative offices, business documents, storage facilities, packing rooms, sampling rooms;

- Charts: factory organizational flow chart, production work flow chart;

- Production information; production line/capacity calculations, daily output checks, information of sensitive points, machinery condition, power supply, transportation;

- Raw materials; supplier and sub-supplier details and;

- Any client special requests.

Request for a demo

There are obviously a number of significant benefits naturally inherent in an integrated, web-based and purpose-built software solution including: improved access to information, a single corporate-wide data source, improved data management, and real-time analysis and performance reporting.
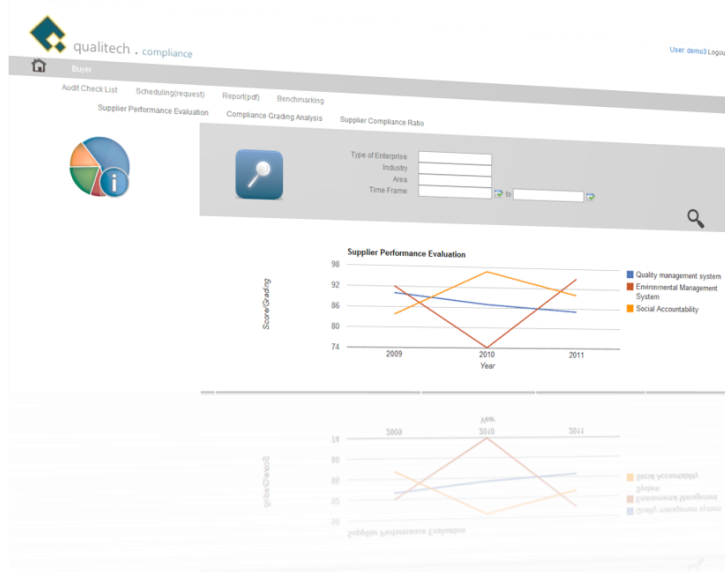

QualiTech compliance provides you with cost-effective, intuitive, and flexible Supply Chain Compliance Management System software.

You can create your own checklists / protocols to perform audits / assessments that include environmental, health & safety, quality, information security, and other parameters as well as social, ethical and labor factors.

Our Software's supply chain audit software provides managers and directors with all the tools necessary to identify, assess and manage supply chain compliance across your business in order to help achieve these business benefits. If you need to audit or assess your suppliers, furthermore QualiTech would be pleased to assist you by providing competence auditors.

Buyer can monitor the performance of their auditee in terms of "score" under different criteria. To demonstrate the risk of compliance, buyer can alter the parameters such as Area, Audit date, Industry & Type of enterprise. These charts allow the buyer to monitor and track the performance of their selected auditee over a period of time.

Compliance grading analysis tool allow the buyer to determine the number of violated legal regulations of the selected auditee group. This tool also allow the buyer to determine the average score of the chosen management system criteria under a specific period.

Supplier Compliance Ratio tool allows the buyer to analysis the number of non-conformances per year over a chosen period of time. To determine the non-compliance ratio % of each legal regulation, hence identify the area of the majority of their risk of their selected group of auditee. The buyer can identify the compliance ratio % of their selected groups of auditee for each management criteria.

Check List section allows the user to create or to amend audit checklist from existing file. There is also a search function allow user to search for different audit checklist that has been established in the past. User needs to create at least 1 checklist before an audit can be scheduled.

Scheduling section allows the user to define the most preferred audit dates for specific audit. An auditee needs to be defined before any audit can be scheduled. Admin and auditee will then need to finalize the specific audit schedule according to the user request.

Report section allows the user to search for all the audit report that has been completed. Search criteria include: request report ID, area, auditee code, auditee name, industry, risk level & audit completion date.

Benchmarking section allow the user to benchmark it's auditee under different criteria with the results from the report. A total of 6 different graphs to give the use a better understanding on the compliance performance from the selected auditee.

Software Solution Partners: Where Compliance and Innovation Meet

QualiTech compliance Solution go to market model is based around a network of partners who deliver the platform in conjunction with their core service offerings. QualiTech compliance Solution is fully versed in the features and functionality and are trained in the configuration and delivery of the solution.

INNOVATION THROUGH COLLABORATION

Organizations faced with the need to implement a second-party auditing program, but limited by an increased demand on internal resources, are insourcing this process to us. By gaining access to our global network of more than 5,00 expert auditors, you will free up your personnel for other tasks, and significantly reduce the travel time and cost of each audit, helping keep your projects on schedule and under budget.

When you insource your second-party auditing to us, you get more than a findings report. You get a business partner dedicated to helping you ensure stronger, more transparent quality control processes while saving you valuable time and money.

Technology at work for you

This compliance auditing tool captures all relevant Law & regulations and allows our auditors to leverage the site requirements profile created in the audit checklist. Auditor can also be used to conduct management systems audits and to measure other business processes such as sustainability programs.

QualiTech compliance solution Software's products are available through a Software as a Service (SaaS) subscription. With SaaS, we are able to deliver more features, enhanced control, better security, superior integration and less risk over time. Also, SaaS eliminates the need for customers to spend resources on infrastructure, upgrades and ongoing maintenance. Customers can start with a single user at a site and easily ramp the software to the entire team across all subsidiaries and locations of the enterprise.

At QualiTech compliance solution, we know your organization strives to achieve the highest level of success and customer satisfaction every day. In order to support that aim, we are proud to offer the Partner program – an innovative partner framework that includes a robust set of program benefits, services, and resources focused on accelerating your business.

Insourcing opportunity for your supplier compliance audit program

At QualiTech compliance solution, we know your organization strives to achieve the highest level of success and customer satisfaction every day. In order to support that aim, we are proud to offer the Partner program – an innovative partner framework that includes a robust set of program benefits, services, and resources focused on accelerating your business. Our partner service include:

- Establishment of your unique compliance system

- Arrange compliance audits with your merchandisers and your suppliers

- Perform compliance audits on your suppliers

- House keeping of your audit schedule & report

- Benchmarking your compliance data

To become our Client

Auditing against International requirements will validate the strength of your supply chain

Globalization has brought a new level of complexity to every supply chain. It is difficult and time-consuming to monitor suppliers and plants when they are located all over the world. But if your buyer don't have full transparency into the processes of your suppliers, your buyer may be putting the quality and reliability of their end product or service at risk. Hence, this is why you have experienced so many factory audits in the past from your buyers.

Our Second-party auditing helps **builds a better reputation to your buyer.** Our second-party audit includes requirements from international standard such as: SA 8000, ICTI, ISO 9001 & many more. By auditing and verify that you are compliance before your buyers perform an audit on you is the proactive step that you should taken before you meet with your new cli-

ents. Our compliance report and certification will help the organization to build a better reputation on company's compliance issues., and hence reduce the risk that your buyer had on you.

Third Party Risk Management is rapidly growing in importance as organizations increasingly turn to outsource providers to reduce operating costs and increase their focus on core competencies. Amid the benefits of outsourcing, there lies a significant risk. Simply stated, liability cannot be outsourced.

Compounding this dilemma, regulators including OIG, OCC, FFIEC and others are increasing their focus on potential third party risks. They want to see organizations proactively identifying potential risks, verifying that business partners, providers and their employees are compliant, monitoring for changes that might create new risks or compliance gaps, and managing the investigation and remediation of incidents. The compliance solution from us helps organizations address these critical requirements.

With our solution, you have a complete platform for automating the essential processes and proactively ensuring vendor compliance. Capabilities include:

Compliance Audit Management

- Organize and archive all audits, with a particular view to those that impact your compliance program.

Business Partner Management

- Centralize the management of relationships and communication with all business partners (vendors, service providers, affiliates, and more)

- Streamline vendor compliance and risk management with automated assessments. Ensure that your policies and procedures are fully utilized by your business partners.

- Enhance and standardize your assessment questionnaires with industry-standard questions based on best-practice standard databases.

- For issues identified in the assessment process, assign investigation and remediation tasks

Risk Management

- Target your key business partners for proactive monitoring and assessments.

- Tightly link compliance and risk assessments into comprehensive risk profiles for each business partner.

- Provide risk management summaries and supporting details as needed for executive management and board-level oversight.

Verification

- Manage the credentialing of vendors using integrated industry-standard resources for verification.

- Track and score individuals and organizations using your standards or government regulations.

- Proactively monitor and validate business partners on an ongoing basis.

Reporting and Dashboards

- Monitor trends to anticipate and address potential issues and proactively prepare contingency plans.

SUPPORT

EXPANDING OUR REACH As we continue to specialize in compliance alone, we've aggressively expanded our business from the Asian market where we started, to the United States, Europe and the newly developing China market. We have 3 sales & operation offices in China to satisfy our worldwide needs, in addition to our partners in Asia.

PLAN FOR THE FUTURE We strive to be the best at what we do and always meet our customers' expectations. QualiTech will always invest in developing the newest technologies; not only to create innovative services, but to maintain the vision of legal compliance for our valuable customers.

QualiTech . compliance
